

Mid module feedback

You looked bored when I was discussing my idea with you, that's rather unnerving.

Class notes: good.

Class web site: good.

Class meetings: good.

Good help, (even if still a bit daunting to ask!)

Contemporary research element if I can do it.

Contemporary research element if I can do it.

*Contemporary research element if I cannot
do it.*

*Some more specific examples to look at in
real world context wouldn't go amiss.*

*Could be less vague about the coursework,
slightly bit more guidance would be helpful.*

*Two pages is not enough for 25% of a
module mark.*

Can't find many past papers (only found 2).

*Would be handy if you said “you should now
be able to do problem sheet 5”*

*The Rock/Paper/Scissors/Lizard/Spock
game in lecture took forever. Pointless.*

Clearer notes on the board.

Watching you type code doesn't help me learn code, maybe have a lab tutorial instead?

Too many things to do at home on your own.

*Stop stopping, whenever someone is late -
this makes you 'unapproachable'.*

Awkward silences in class when you're waiting a while for a response (admittedly, only occasionally) - there comes a time where you might be able to assume that nobody knows.

Prevent snowfall in the future.

Look at ncase.me website.

Freddos have gone down in price for the first time in years - just a heads up.
